*National University of Pharmacy, Kharkiv*

To date there is an acute problem concerning extemporaneous medicine manufacture in Ukraine. On the one hand, paying attention to decrease of quantity of manufacturing pharmacies, doctors prescribe manufactured remedies. On the other hand, after conversion to market relations, pharmacies are considered to be entities that should be profitable, and to date a care issue is the only way to achieve the main goal.

Therefore, during last 20 years manufacturing pharmacies have been being closed, and doctors gradually began to prescribe affordable ready medicine, thereby limiting the human right to choose the method of treatment. Moreover, medical representatives of different pharmaceutical companies, who promote their products to the market, exert a significant influence on prescribing of medicine by doctors. It means that the issue of advertising can not be removed from the point of view.

January 18, 2013 on the website of the Ministry of Health of Ukraine on medicine has been posted a draft order of Ministry of Health of Ukraine "On amendments to the license terms of an economic activity in manufacture, whole- and retail sale of medicine" concerning the requirements to activity of pharmacies. The document also noted that every tenth pharmacy must manufacture extemporaneous medicine. As of 01.01.2015, the total number of pharmacies in Ukraine made up 15092. On conditions that each tenth pharmacy must have a license of extemporaneous manufacture, according to the draft order, then there should be about 1.5 thousand pharmacies that manufacture extemporaneous medicine in Ukraine.

Now the total number of pharmacies, which have a right to an extemporaneous manufacture made up 433. The leader of this index is the capital, which represents 69 pharmacies that have a license of extemporaneous manufacture. Among the regional centers 19 and more of such pharmacies are presented in Lviv and Kharkiv. It is worth being noted that there are pharmacies in all regions of Ukraine that manufacture medicine.
